

Pentane Blending Unit

Ideal for use in:

- Appliance
- Construction
- Pipeline Coatings

Environmentally Friendly Systems for Polyurethane Processing

Linden Industries, a global manufacturer of polyurethane processing equipment, has introduced a system that replaces HFC and HCFC blowing agents with the environmentally friendly Pentane hydrocarbon (HC) blowing agent. Pentane is so friendly and safe for the environment that it is rated at "Zero" ODP and "Zero" global warming. The unit is self-contained and can be provided with new equipment or as a retrofit.

PENTA - FUSION is a Pentane blending unit engineered and manufactured to customer specifications. This unit is usually employed in discontinuous applications requiring "poured shots". Blended material from the unit may be routed directly to properly equipped day tanks or to batch holding tanks for storage and distribution to day tanks. Linden is committed to helping companies comply with environmental standards.

Replacing HFCs and HCFCs is a goal with most companies and our pentane HC unit will meet both current and future environmental demands.

Available for shipping worldwide

Speciality power requirements are available for machine export. If equipped with the optional **HOTLINE™** Modem Service Support System, a rapid machine analysis can be performed in almost all corners of the globe. Flow monitoring enables on-line process troubleshooting.

Staffed with over a century of combined polyurethane industry expertise, Linden carries a proven record of forging the way to new technologies. Together as your engineering partner, we can offer you ongoing innovations through a long-standing commitment to customer satisfaction.
